

PREVENTING FALLS IN CHILDREN

♥ IN THE HOSPITAL ♥

Children are naturally active, curious, and may not fully understand the dangers around them. When they are treated in the hospital, preventing falls is very important. Below are some things families and caregivers should pay attention to:

THINGS TO PAY ATTENTION TO

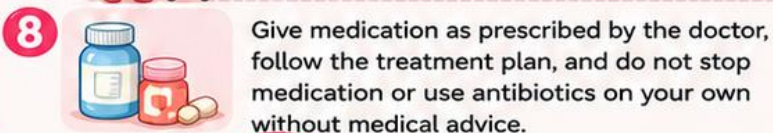

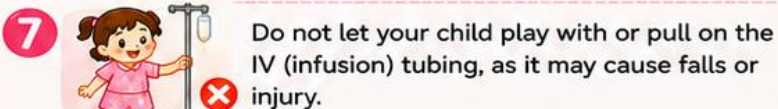

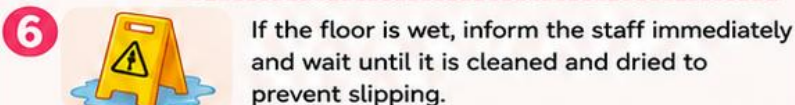

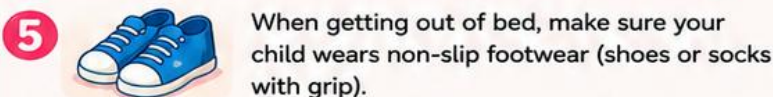

SAFETY WHILE SLEEPING

- Always keep the side rails up when the child is in bed.
- Keep personal belongings within easy reach (such as tissues, water, diapers, etc.) and do not leave the child alone.
- If needed, ask the nurse or family member for assistance to ensure safety.

SAFETY DURING ACTIVITIES

IMPORTANT REMINDER

Falls are one of the most common accidents in hospitals among children. Preventing falls requires teamwork between healthcare providers and families to keep children safe and help them recover quickly in a healthy environment.
